# Your children are unlikely to inherit any of the diseases we've tested

Though the donor is a carrier for 1 disease, the important thing is that Caroline is not a carrier for that same disease.

unlikely carrier

Cystic Fibrosis

Characterized by impaired lung and digestive function due to thick, sticky mucus. The disease typically worsens over time and currently has no cure.

Your children are unlikely (0.0007%) to have this disease.

Both of you are unlikely to be a carrier for any of the others in the 5 disease panel.

# Continue on with your family planning. No further action is recommended.

Each of your children is unlikely to have any of the diseases we test for. However, each child has a 50% chance of being a carrier of any of the same diseases as you and your partner. When your children grow up it will be helpful to inform them of this possibility.

## Send your report to your family or doctor

If you have siblings, they have 50% chance of being a carrier of the same diseases as you. Invitees will receive an email allowing them to view your report. You can revoke this access at any time.

Some siblings appreciate knowing this information, but some do not. Consider these reasons before telling family.

Grant report access to...

## Limitations

This test is not able to guarantee your children will or will not inherit a disease but rather provide awareness to the likelihood of a child having a disease tested for.

Read the limitations of this test to understand what is and is not covered.
