Oliver, you are a carrier for 3 disease(s)

Being a carrier is common and does not mean you have the disease.

Each child's risk of inheriting a disease is undetermined until we test your partner.

You are unlikely to be a carrier for any of the others in the 5 disease panel.

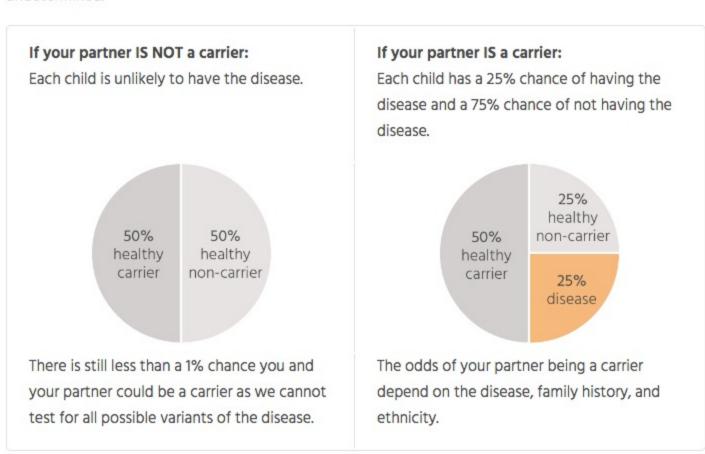

A counselor is always available

Still have questions? Review your results with a licensed genetic counselor. We are available 9am-5pm Monday through Friday.

Your children's risk is still undetermined

Until we know if your partner is a carrier for the same diseases as you, the risk to your children is undetermined.

Why should my partner BE tested?

Some parents want to know their children's chance of inheriting a disease so that, if needed, they can:

- Take precautionary measures during pregnancy.

 Drange for a shild with disease before high.
- Prepare for a child with disease before birth
- Alter family plans.

Why should my partner NOT BE tested?

Some parents do not want to know if they are a carrier of a disease, or want to wait until birth to know if their child has inherited any disease.

Request partner's test

Send your report to your family or doctor

If you have siblings, they have 50% chance of being a carrier of the same diseases as you. Invitees will receive an email allowing them to view your report. You can revoke this access at any time.

Some siblings appreciate knowing this information, but some do not. Consider these reasons before telling family.

Grant report access to...

This test is not able to guarantee your children will or will not inherit a disease but rather provide awareness to the likelihood of a child having a disease tested for.

Read the limitations of this test to understand what is and is not covered.

ned the inflictions of this test to direct state what is that is not covered
